

Element Care's Avatar Home Companions

Element Care was one of the first PACE organizations in the country to provide participants with care.coach Avatars in their homes. They are a powerful tool that empowers our clinical team to remotely monitor our participant's health, remind them to take their medications and exercise, and provide much needed 24/7 companionship which is so important at times like these.

Since the COVID-19 crisis, we have installed additional Avatars in our participants' homes and integrated scripts designed to check their symptoms and general well-being throughout the day.

Do you know an older adult who could benefit from a 24/7 virtual home companion that's connected to their care team?
